Instruction Scheduling to Mitigate Inductive Noise

Raj Parihar

University of Rochester, NY

March 1, 2010
Introduction
  Instruction Scheduling

Inductive Noise
  Circuit Level
  Architecture Level

Conclusion
Introduction

- Instruction scheduling
  - Creates a feasible schedule
  - Maps to target architecture
- Challenges
- Goals to be achieved
Instruction Scheduling

1. Possible goals
1. Possible goals
2. To achieve the high speed
Instruction Scheduling

1. Possible goals
2. To achieve the high speed
3. To lower the power consumption
Inductive Noise

- Circuit level issue
- Hard to solve at circuit level
- Architecture is also not very flexible

Insert power supply circuit here
Inductive Noise at Circuit Level

- Hard to solve at circuit level
- Architecture is also not very flexible

Insert power supply circuit here
Inductive Noise at Architecture Level

- Hard to solve at circuit level
- Architecture is also not very flexible

Insert power supply circuit here
1. Compiler can help in solving some of the circuit problems.
Conclusion

1. Compiler can help in solving some of the circuit problems.
2. We have much higher flexibility is higher level.
1. Compiler can help in solving some of the circuit problems.
2. We have much higher flexibility is higher level.
3. Instruction Scheduling should not only target speed.
